

Farmington State Bank selects Nw Bank Technology to provide Check 21 software solutions for the Bank.

Meridian, Idaho, January 26, 2010—NBT, Inc (dba: Nw Bank Technology), a leading developer of check automation software for financial institutions, announced today that Washington-based Farmington State bank has successfully installed MIPS (Micr Item Processing System) branch capture software as well as electronic transmission modules to send and receive cash-letter files from Federal Reserve Bank.

According to Ted Rudder, Senior Vice-President, NBT, Inc., "Farmington State Bank is an ideal institution to use electronic check processing. This institution is located in a rural, agricultural area of Eastern Washington and transportation is a complication for the bank. With electronic capture and transmission of files to and from FED, transportation is no longer a hindrance to the bank."

Rudder continues, "We are very pleased to work with Farmington State Bank. The installation and testing with the Bank and Federal Reserve went very smooth. We look forward to working with this bank for many years to come." Additional information is available at www.nwbt.net.
